About Me

Over 10 years of experience as a Front-end Developer.

While at **Ted Baker** as Front-end developer, I have been building complex content pages, combining **HTML**, **CSS** (using **SASS**), and **Javascript**.
In 2022, the company decided to re-platform and went for a Single Page Application Solution, using **React** and **Next.js**, which gave me the opportunity to familiarise myself with these two technologies.

Following the launch, as part of **CICD**, I developed several features, such as check instore availability, mini basket popup, sticky add to bag option on mobile, and also owned bug tickets.

In November 2023, the new management team decided to modernise the existing digital solution and started the migration process to **Contentful**. From the early stage of the project, I participated in the decision-making process, writing technical tickets in **Jira** for new features and improved existing ones. I was also part of the **end-to-end user testing** phase.
I developed a deep understanding of Contentful, being in charge of its configuration (creation of **content models** and content) and the training of the content team.

While working at Chorus, a web agency based in Paris specialised in portal websites, I was the sole person in charge of the Front-end development aspect for complex structures, combining HTML, CSS and Javascript.

Involved throughout the whole creation process, I have worked closely with both the web design and back-end team. I was in charge of building the best UX possible, preventing any subsequent technical issues that could emerge from faulty design and developing the best responsive interface.

Education

2010
Bachelor Web Developer
Hetic (former Cifacom) • Montreuil, Paris France

2002
BTS Office Manager
Sylvia Montfort Institute • Chartres, France

Spoken Languages

English 
French
